SL 38

System Overview: Tilt & Turn Window

Small frame sections combined with cutting-edge energy saving performance: SL 38 is the perfect solution for sustainable design.

The growing importance of energy related matters raise new challenges for architecture. Designers are ever more careful to carry out eco-friendly projects with low energy consumption.

The SL 38 represents a new generation of cutting-edge energy-efficient door and window product. Large polyamide thermal breaks and optional triple glazing enhance the performance while minimal sitemlines create larger glass areas.

The SL 38 product line showcases a 50mm (2") frame sitemline and is available in fixed, tilt and turn, hopper, and coner 90 degree SSG units. The frame strength allows for large format opening and fixed elements allowing freedom of design. Furthermore, various frame and sash designs provide flexibility in architectural styles.

Affiliated Associations:

Glazing depth allows for glass thickness up to 50 mm (2").

Various architectural profile options.

EPDM center seal gasket.

Small chambers limit heat loss through convection.

Enhanced thermal polyamide.

Minimal sightlines.

SL 38

Design Features: Tilt & Turn Window

For the architect:
3 frame design options
to adapt to various
architectural details
and aesthetics.

1. Minimal frame dimensions.
2. Large polyamide thermal break.
3. EPDM high performing main gasket seal.
4. Frame depth allows for glass thickness up to 50mm (2").
5. Multiple frame and sash design options.

SL 38 Window Options

System & Performance

The SlimLine 38 series feature a highly insulated 3-chamber system with ultra-slim profiles for increased thermal characteristics. The solution is available in fixed, turn, and turn-tilt variations with Uf values down to 2.3 W/m²K (1.9 W/m²K for the HI version). The system is suitable for both double and triple glazing options.

SL 38 Door Options

System & Performance

SL 38 Swing doors systems integrate seamlessly with the SL38 window product. Inswing or outswing configurations are available in both framed or low threshold options. Integrating dual or triple glazing can allow designers to achieve the thermal performance required to meet today's stringent building code.

ADA sill option

A high-performance door must have a superior sealing system. Without it, your doors will not provide the necessary energy savings, indoor air quality and interior comfort. For tough climates, such as extremely cold winters, ocean front properties or high-rise buildings, an additional line of defense provides additional protection from air, water and sound. Tiltco's SL 38 door system features a third flexible seal located in the center of the frame. This seal is one continuous seal that is designed to remain in contact under all environmental conditions.

Clear Anodized

Powder coating is widely considered to be the ideal method for protecting aluminum profiles and parts. By electrostatically spraying and fusing the mixture of pigments and resins onto a surface, you can achieve a high-quality, durable finish that will extend the life of the metal and ensure its continued aesthetics.

Concealed hinge

The SL 38 hinge system enables effortless 3D adjustability and elegant contours, in addition to high load capacities and secure pull-out strength. The completely concealed hinge systems from Tiltco, boasts innovative properties which are optimised to meet the requirements of modern architecture.

Configurations

CP 130 LS

System Overview: Lift & Slide

Invite nature in your home. Incorporate the largest openings into your designs.

The robust CP 130 LS allows the construction of large and stable lift-slide panels. Independently tested to provide unparalleled resistance to air, water, structural and thermal performance.

The CP 130 lift-slide door operation allows the door to lift 6mm (1/2") with the turn of a handle and glide smoothly along its guide rails with no friction.

Effortlessly operate sliding panels up to 300 kgs and over 10 feet tall while maintaining overall performance. Available in OX, OXO, OXXO, OXXXXO, 90 degree corner, and pocket solutions.

Max glass thickness 38mm
(1 1/2")

Max panel weight 300kg

Heavy duty rollers allow
panels to glide
effortlessly.

Double weather EPDM gasket

Interlock (Closed position)

Head Section

Sill Section

CP 130 LS features advanced operating hardware. A simple turn of the large handle quietly disengages the secure locking mechanism and gently lifts the door 6mm before sliding across its rail. In the closed position, the door descends on its interior profile which provides a high water and wind tightness.
